

Part-Time Consultancy Opportunities

GeoTechInvest is rapidly growing business located in Bergen, NH providing specific solutions to the oil and gas industry. Since our formation in 2010 we have been actively working with the industry in developing ideas and concepts to help prevent a major event, like the Gulf of Mexico Macondo accident from happening again. We also work with a major international drilling company reviewing and updating drilling rig safety cases, that were introduced following a previous major accident, the Piper Alpha disaster. We are a company gaining recognition for getting things done and making significant improvements in the area of health, safety and environment.

As well as developing new concepts and delivering enhanced safety cases, GeoTechInvest has launched in 2012 two new start up companies that will actually bring some of these concepts into the marketplace.

The Well Academy provides the industry with new well control training solutions. Using a specially designed room with simulator equipment that closely resembles real well control equipment used on drilling rigs, The Well Academy delivers scenario based well control training.

WellSpec provides the industry with an independent review and examination service. This is largely to ensure oil & gas and geothermal companies have the necessary processes, plans and programmes in place to safely drill and complete wells.

With this rapid expansion comes opportunity and GeoTechInvest is seeking highly qualified professionals that are interested in providing their services on a part time consultancy basis. Specifically we would like to hear from:

Safety and Environmental Professionals
Qualified Trainers and Instructors
Technical Writers and Translators

Knowledge and experience gained from the oil and gas industry is useful but not essential.

We are willing to be flexible if you are too.

If interested please contact:
